No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
CC receptor 3 (CCR3) gene. The invention also relates to compositions and CC methods for haplotyping and/or genotyping the CCR3 gene in an individual. CC Polynucleotides of the invention are useful for studying the expression CC and function of CCR3 and in expressing CCR3 proteins for use in screening CC and function of CCR3 and in expressing CCR3 proteins for use in screening CC used in gene therapy. The polymorphism and haplotype data is useful for CC used in gene therapy. The polymorphism and haplotype data is useful for CC walidating whether CCR3 is a suitable target for drugs to treat type IV CC hypersensitivity reactions and human immunodeficiency virus (HIV) 1, CC screening for such drugs and reducing bias cells in clinical trials of CC such drugs. The genotyping method is useful for determining whether an CC individual has one haplotype or haplotype pairs. The haplotyping method is useful for determining whether an CC is useful for improving the efficiency and outcome of several steps in CC with CCR3 activity such as type IV hypersensitivity reactions and HIV-1.

The present sequence is human CCR3 gene located on chromosome 3p21.3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The invention relates to genetic variants of human chemokine (C-C motif) creceptor 3 (CCR3) gene. The invention also relates to compositions and centhods for haplotyping and/or genotyping the CCR3 gene in an individual. CC methods for haplotyping and/or genotyping the CCR3 gene in an individual. CC polynucleotides of the invention are useful for studying the expression candidate drugs to treat diseases related to CCR3 activity. They are also used in gene therapy. The polymorphism and haplotype data is useful for validating whether CCR3 is a suitable target for drugs to treat type IV hypersensitivity reactions and human immunodeficiency virus (HTV)-1, creening for such drugs and reducing blas cells in clinical trials of such drugs. The genotyping method is useful for determining whether an individual has one haplotype or haplotype pairs. The haplotyping method is useful for improving the efficiency and outcome of several steps in the discovery and development of drugs for treating diseases associated with CCR3 activity such as type IV hypersensitivity reactions and HIV-1.

The present sequence is human CCR3 gene located on chromosome 3p21.3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; chemokine (C-C motif) receptor 3; CCR3 gene; haplotyping; genotyping; type IV hypersensitivity reaction; HIV-1; gene therapy; human immunodeficiency virus 1; polymorphism; chromosome 3p21.3; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated polymorphic variants of chemokine (C-C motif) receptor 3 (CCR3) gene useful for studying function of CCR3, expressing the CCR3 protein and to screen drugs to treat CCR3 activity-related diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             misc_feature

Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.

Claim 1; SEQ ID NO 5403; 44pp; English.

The present invention describes a method (M1) for screening for an anticc neoplastic agent. The method involves exposing cells to a chemical agent
to be tested for anti-neoplastic activity, determining a change in
cc expression of at least one gene (I) of a signature gene set, where (I)
cc comprises a sequence (S) selected from 8447 sequences (given in ABL61664
cc challyollo), or is at least 95% identical to (S), where a change in
cc expression is indicative of anti-neoplastic activity. (I) has cytostatic
cc anti-neoplastic agent, and can be used for producing a product which is
cc anti-neoplastic agent, and can be used for producing a product which is
cc anti-neoplastic agent, and can be used for producing a product which is
cc the data collected with respect to the anti-neoplastic agent as a result
cc of M1, and the data is sufficient to convey the chemical structure and/or
cc properties of the agent. M1 can be used in the treatment of cancer such
cc as colon, brass, stomach, lung, thyroid, ossophageal, ovarian, kidney,
cc prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
cc eall carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
The invention relates to a composition comprising a plurality of cDNAs for detecting the altered expression of genes in an immunological response. The invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the nucleic acids of the sample with an array comprising the plurality of cDNAs under conditions to form one or more hybridisation complexes, detecting the hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes with the level of hybridisation form to more hybridisation complexes with the level of hybridisation complexes.
                                                                                                                                                                                                                                                                                                                                                                                    A composition comprising a plurality of cDNAs, useful for detecting altered expression of genes in an immunological response or for diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma or osteoarthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; gene; ss; immunological response; immunopathological concorn's disease; asthma; ulcerative colitis; hypereosinophilia; irritable bowel syndrome; osteoarthritis; rheumatoid arthritis; acute monocytic leukaemia; antiinflammatory; antiasthmatic; antiosteopathic; antiarthritic; antirheumatic; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US6607879-B1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ADI31633

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and a method for identifying a plurality of polymucleotide probes. The cDNAs are useful as hybridisable array elements in a microarray for monitoring the diagnosis of an immunopathology, such as Crohn's disease, asthma, the diagnosis of an immunopathology, such as Crohn's disease, asthma, costeoarthritis, rheumatoid arrhitits or acute monocytic leukaemia, and in identifying agents for the treatment of the diseases. The microarray may also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition may also be used in purification of a subpopulation of mRNAs, cDNAs or genomic fragments. This sequence are presents a human cDNA of the printed specification but was obtained in electronic format directly from USPTO at sequance.atmant of the printed specification but was obtained in electronic format directly

The polynucleotides are useful in research and diagnostic applications particularly in cancer and immunological conditions, such as polynucleotides, anaemia, asthma, atheroselerosis, bronchitis, ulcerative colitis, diabetes, multiple sclerosis, osteoporosis, pancreatitis, infections and arthritis. The present sequence represents a human lymph node cDNA used to detect blood cell and immunological response gene expression. Note: The present sequence does not appear in the printed specification but was obtained in electronic format from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New compositions having a number of first, second and third polynucleotide probes, useful in research and diagnostic applications cancer and immunological conditions e.g. AIDS, diabetes, osteoporosis infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1717 BP; 434 A; 428 C; 351 G; 504 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       09-FEB-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 15; SEQ ID NO 959; 16pp; English.

The 88-2B cDNA was obtained from a macrophage cDNA library using 88-2B-spēcific primers. A full-length clone (see AAT89161) for chemokine receptor 98C (AAWZ7123) was also obtained. 88C and 88-2B cDNAs can be used to produce recombinant polypeptides in transformed host cells for use in the treatment of e.g. atherosterosis, rheumatoid arthritis, tumours, asthma, viral infection, AIDS and inflammatory conditions. Nucleic acid fragmente can be used to isolate genomic sequences, to detect allowed the gene (for diagnosis or in gene therapy), to alter receptor genetics to facilitate identification of modulators and to produce knockout animals, and (antisense forms) to alter/study the genetics and expression of the receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chemokine receptor 88-2B; atherosclerosis; rheumatoid arthritis; tumour; asthma; viral infection; AIDS; inflammation; autoimmune disease; therapy; diagnosis; leukocyte trafficking; G protein coupled receptor; human; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to screening for a modulator of human communodeficiency virus (HIV) or simian immunodeficiency virus (SIV) communodeficiency virus (ADC03341) or macague (ADC03359) 88C chemokine receptor polypeptide with communodeficiency communodeficiency communodeficiency communodeficiency contacting for a communodeficiency contacting for a communication of cells (commyrising contacting HIV infection of cells (commyrising contacting cells with an antibody to at least one of human chemokine receptors 88C and 88-28 with HIV, and detecting HIV infection of the cells with an antibody to at least one of cells (commyrising contacting cells with an antibody to at least one of human chemokine receptors 88C and 88-28 with HIV, and detecting HIV commonsitions of the present invention are useful for the diagnosis and creatment of disorders associated with the aberrant expression or cativity of 88C associated with the aberrant expression or cativity of 88C associated with the aberrant expression or cativity of 88C associated with the aberrant expression or activity of 88C associated with the aberrant expression or cativity of 88C associated with suppression, asthma, viral infection, CC and and other inflammatory conditions. The genes for human 88-C and 88-28 are located on chromosome 3p21. The present sequence encodes human communications and chemokine receptors associated with suppression.

The invention relates to a novel antibody that specifically binds to the extracellular domain of a chemokine receptor 88C or 88-2B polypeptide expressed on the surface of cells. The antibody fails to cross-react with an MCP-1 receptor (CCCKR-2) and is useful for inhibiting human or simian immunodeficiency virus (HIV or SIV) infection of the cells expressing chemokine receptor 88C or 88-2B. The invention is also used to detect 88C or 88-2B gene products their analogues or biologically active fragments. The antibody products may be used to as modulators of receptor activities or to diagnose tissue-specific variations in expression of 88-2B or 88C. The invention is also used in the preparation of vaccines. The present sequence is the human chemokine receptor 88-2B cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Key
